Introduction

This report documents five current meter deployments in Faroese waters in 2016 – 2017. Each deployment is identified by an 8-character label where the first four characters indicate the site (Fig. 1) while the last four characters show year and month of deployment. Three of the moorings were located at standard (Nordic WOCE) sites. The five deployments are listed in Tables 1 and 2. In addition to these deployments in Faroese Waters one ADCP mooring (deployment IFWW1606) was deployed in the Western Valley on the Iceland-Faroe Ridge and it is documented separately in Technical Report 17-03.

At sites NWFB, NWFC and NWNB RDI ADCPs were placed in the top of single-point moorings. For each deployment, the ADCP measures the velocity averaged over a number of depth layers ("bins"). At 20 minute intervals, the ADCP records the data from all bins into "ensembles". Deployment NWFC had a Sea-Bird SBE39 temperature recorder on the mooring, while NWFB had a Sea-Bird SBE37 that recorded temperature, salinity, oxygen and pressure. This SBE37 instrument is funded by the H2020 project AtlantOS (Grant agreement No 633211).

At sites PLDA and PLDB an Aanderaa RCM9, a Sea-Bird MicroCat and other temperature recorders were on the moorings. The Aanderaa current meters recorded speed, direction and temperature at 60 minutes intervals, the MicroCats recorded temperature, salinity and pressure, while the Starmons and the SBE56 instruments recorded temperature only. For more details see Table 2.

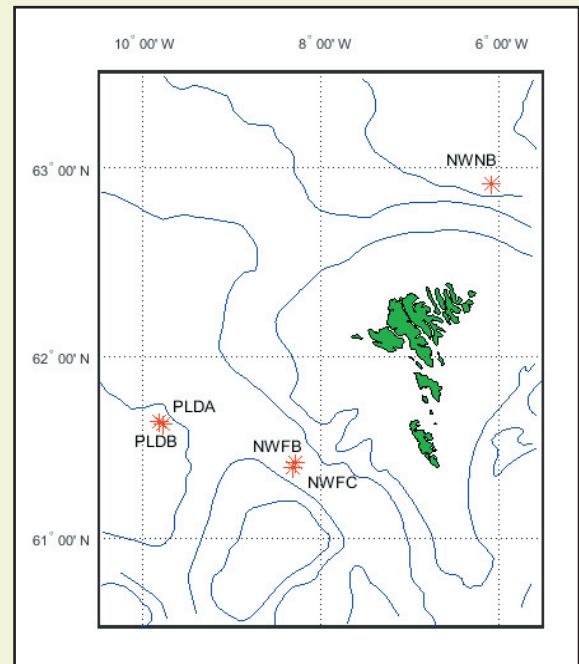

Figure 1. ADCP mooring sites in Faroese waters 2016-2017 superposed on a map with the bottom topography. Each site is indicated by a four-letter label.

Table 1. List of deployments with information on ADCP number, type and settings.

Deployment	No	Instr.	Freq.	Pings	Binlng.
		ADCP type	kHz	per ens	m
NWFB1606	1577	Broadband	75	1	25
NWFC1606	1285	Broadband	75	1	25
NWNB1606	1644	Broadband	75	1	25
PLDA1606		No ADCP			
PLDB1606		No ADCP			

Table 2. List of deployments with information on duration and range of valid data. All depths are in meters. The last column indicates whether other instruments were on the mooring.

Deployment	Bottom depth	Int. min.	Valid data period	Dur. days	No bins	Depth range	Comments
NWFB1606	811	20	2016 06 10-2017 05 18	342	22	244- 769	Microcat
NWFC1606	832	20	2016 06 10-2017 05 18	342	26	165- 790	SBE39
NWNB1606	968	20	2016 06 08-2017 05 22	347	24	103- 678	
PLDA1606	1101		2016 06 10-2017 05 19	343			Microcat, Starmon
"							Aanderaa, SBE56
PLDB1606	1086		2016 06 10-2017 05 19	343			Microcat, Starmon
"							Aanderaa, SBE56

Quality control

The ADCP data have been quality controlled using an automatic routine. The data have been processed such that threshold values for e.g. maximum error velocity, minimum mean correlation and others were set. Also, error velocities deviating more than a selected number times the standard deviation from the mean error velocity were error flagged. Speed spikes are calculated in a similar manner selecting a number of standard deviations and then error flagging those values where u or v deviated more than the threshold from a 3 point median filtered u and v series. For specific values used, see the error statistics for the individual series.

Generally, the series have been edited up to the level where about 50% of the observations were found to be valid. Bins above this level have not been included.

The velocity direction has been corrected for magnetic deviation, by adding a constant as indicated in the header of the data file.

The instrument depth at site NWNB is found using the data from the surface echo. The instrument depth at deployment NWFC is found from the echo sounding depth (corrected for change in sound velocity). The instrument depths at sites NWFB, PLDA and PLDB are found from the MicroCat pressure measurements.

The Aanderaa data have been calibrated using calibration coefficients from the manufacturer. In the Aanderaa current meter, several speed and compass readings are taken during a sampling interval, while the temperature and conductivity readings are taken once at the end of the interval only. At the end of the interval, the instrument stores a vector average of the velocity for the whole sampling interval, as well as the temperature and conductivity readings. In the data file, the time of each record is the middle of the speed-averaging interval. In the calibration procedure the velocity direction has been corrected for magnetic deviation, by adding a constant. The actual correction for each deployment is stored in the header of the data file. The data have been quality controlled by a standard procedure based upon data variation with time in relation to neighbouring values (spikes). The editing has been done manually using an interactive

graphical software package developed by FAMRI, based upon MATLAB.

The temperature and pressure from two (of three) MicroCats have been calibrated by being attached to a CTD one day prior to deployment. The pressure, temperature, salinity and oxygen data from the MicroCat instruments have been quality controlled by a standard procedure based upon data variation with time in relation to neighboring values (spikes). The editing has been done manually using an interactive graphical software package developed by FAMRI, based upon MATLAB.

The Starmon, SBE39 and SBE56 data have been quality controlled by a standard procedure based upon data variation with time in relation to neighbouring values (spikes). The editing has been done manually using an interactive graphical software package developed by FAMRI, based upon MATLAB.

Report format

For each deployment, the report contains several pages, beginning with a page that has a drawing of the mooring and details of the deployment. After that, there are some pages describing the ADCP data, beginning with a page with detailed error statistics and threshold settings for the deployment, and it indicates also how many »long« (i.e. several consecutive ensembles) error gaps are for each bin. On the next page there is for each bin listed the average speed (scalar average) and velocity magnitude and direction (vectorial average) as well as the fraction of »good« ensembles (in parts per thousand). This is followed by a frequency distribution of speeds for each bin, which lists the frequency (in parts per thousand) of speeds (scalar) exceeding specified values. Then there are some pages listing tidal constituents. These pages contain five tables with data for the constituents M₂, S₂, N₂, O₁, and K₁. Each table lists for each bin the amplitude and Greenwich phase lag for the east and north velocity components and lists also major and minor semi-axes of the tidal ellipse for the constituent as well as its inclination (Fig. 2) and sense of rotation (cyclonic = C, anticyclonic = A). The tidal constants were computed by an adapted version of the Foreman FORTRAN package.

The description of the Aanderaa current meter data includes first a text page listing metadata information in the header and showing the list of parameters in the data file with a tally of the number of records flagged and not flagged for error in each parameter. Any comments to the data are then listed. The rest of the text page describes features of the velocity observations in the series. First is shown the residual current, defined as the vectorial average of all non-flagged records. Next are shown the results of tidal analysis on the series. The number of records interpolated before the analysis is listed as well as the number that could not be interpolated (too large gap). Since the deployment has 60 minutes intervals, all analyses are performed on unfiltered data. 15 of the dominant constituents are listed and for each constituent, amplitude and Greenwich phase lag are shown for the east (E-ampl and E-gpl) and the north (N-ampl and N-gpl) velocity components respectively, followed by the characteristics of the tidal ellipse, its major and minor semi-axes, the inclination (Incl) of the ellipse, its Greenwich phase lag (Grphl), and whether it rotates cyclonically (C) or anticyclonically (A). The definitions of the tidal ellipse parameters are shown in Figure 2. The tidal constants were computed by an adapted version of the Foreman FORTRAN package. Finally, on the Aanderaa text page is a table listing the directional current distribution as relative numbers of observations in parts per thousand. The table also lists for each direction interval, the relative flux, the average speed and the maximum speed. Then one page shows plots of the listed parameters as a function of time and one page shows the progressive vector diagram.

The MicroCat data are presented on two pages, the first page showing plots of temperature, salinity, depth and possible oxygen time series, while the second is a T-S diagram of the recorded data.

The Starmon, SBE39 and SBE56 temperature data is presented on one page.

On the following pages, the data descriptions from each deployment are presented in the same sequence as Tables 1 and 2. For each deployment, the ADCP data are presented first, followed by possible MicroCat, Aanderaa or temperature recorder data.

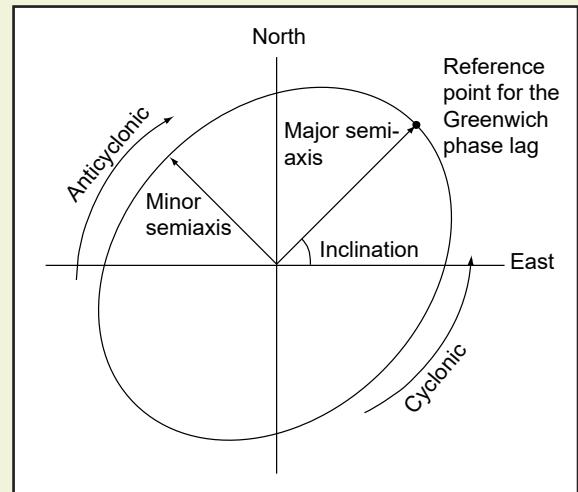

Figure 2. Parameters of the tidal ellipse for a given constituent. The reference point for the Greenwich phase lag is always chosen to be above the east-west axis.

NWFB1606

Latitude: 61°25.044'N

Longitude: 008°16.937'W

Echo sounding depth: 822 m

Bottom depth corr.: 811 m

Time of deployment: 10/6 - 2016 1014 UTC

Time of recovery: 18/5 - 2017 1546 UTC

ADCP:

Instrument no.: RDI ADCP 1577

Instrument frequency: 75 kHz

Height above bottom: 6 m

Depth: 805 m

Time of first data: 10/6 - 2016 1040 UTC

Time of last data: 18/5 - 2017 1520 UTC

Sample interval: 20 min

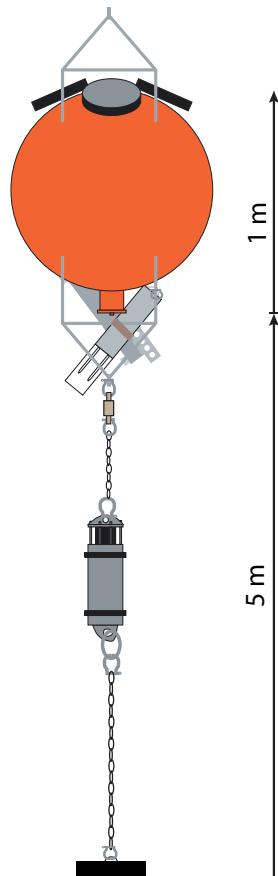

No. of ensembles: 24639

Pings per ens.: 1

Binlength: 25 m

Depth of first bin: 769 m

No. of bins: 22

MicroCat

Instrument no.: 14007

Height above bottom: 5 m

Instrument depth: 806 m

Time of first data: 10/6 - 2016 1201 UTC

Sample interval: 10 min

No. of ensembles: 8212

Data:

The MicroCat data have not been calibrated.

NWFB1606 ADCP 1577

Error statistics for deployment: NWFB1606 updated 2017/07/14

Temperature edited

Surface distance not edited

Heading, pitch and roll not edited

Intensity not edited

Velocity edited using these data filters:

Minimum Mean Correlation: 40.0

Maximum Speed, number of std dev for each bin: 4.0

Maximum Error Velocity (erv_tr+0.1*spd): 100.0

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 1): 5.00

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 22): 3.44

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 32): 2.00

Maximum absolute Pitch and Roll: 20.0

Total number of ensembles: 24639

Interval between ensembles: 20 min

Original number of bins: 32

Number of acceptable velocity bins: 22

Flagged values have been replaced by error codes: -999.99 for temperature and depth, -999 for velocity and intensity. For observations where velocity is flagged, error codes have been inserted into speed, direction and vertical velocity files

Number of temperature ens. flagged: 0

Below are for each bin listed ensembles flagged for intensity in number and for velocity in number and % of total ens.number. For velocity is also shown the number of gaps of various lengths (gap length = number of consecutive flagged ens.)

Bin	Int. ens.	Velocity ens.	Number of velocity gaps of length												
			flgd	flgd	flgd	1	2	3	4	5	6-10	11-20	21-30	31-50	>50

Data:

All data ok.

NWFC1606 ADCP 1285

Error statistics for deployment: NWFC1606 updated 2017/10/23

Temperature edited

Surface distance not edited

Heading, pitch and roll not edited

Intensity not edited

Velocity edited using these data filters:

Maximum Speed, number of std dev for each bin: 5.0

Maximum Vertical Velocity: 150.0

Maximum Error Velocity (erv_tr+0.1*spd): 100.0

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 1): 5.00

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 26): 2.94

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 32): 2.00

Total number of ensembles: 24637

Interval between ensembles: 20 min

Original number of bins: 32

Number of acceptable velocity bins: 26

Flagged values have been replaced by error codes: -999.99 for temperature and depth, -999 for velocity and intensity. For observations where velocity is flagged, error codes have been inserted into speed, direction and vertical velocity files

Number of temperature ens. flagged: 0

Below are for each bin listed ensembles flagged for intensity in number and for velocity in number and % of total ens.number. For velocity is also shown the number of gaps of various lengths (gap length = number of consecutive flagged ens.)

Bin	Int. ens.	Velocity ens.	%	Number of velocity gaps of length																
						1		2		3		4		5		6-10	11-20	21-30	31-50	>50

Data:

All data ok.

NWNB1606 ADCP 1644

Error statistics for deployment: NWNB1606 updated 2017/07/14

Temperature edited

Surface distance not edited

Heading, pitch and roll not edited

Intensity not edited

Velocity edited using these data filters:

Maximum Speed, number of std dev for each bin: 5.0

Maximum Error Velocity (erv_tr+0.1*spd): 100.0

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 1): 6.00

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 24): 3.22

Speed Spikes, u and v deviated from 3 point median by number of std dev (bin 32): 1.00

Vertical Speed Spikes, u and v deviated from 3 point median by number of std dev: 4.0

Total number of ensembles: 24994

Interval between ensembles: 20 min

Original number of bins: 32

Number of acceptable velocity bins: 24

Flagged values have been replaced by error codes: -999.99 for temperature and depth, -999 for velocity and intensity. For observations where velocity is flagged, error codes have been inserted into speed, direction and vertical velocity files

Number of temperature ens. flagged: 0

Below are for each bin listed ensembles flagged for intensity in number and for velocity in number and % of total ens.number. For velocity is also shown the number of gaps of various lengths (gap length = number of consecutive flagged ens.)

Bin	Int.	Velocity	Number of velocity gaps of length												
			ens.	ens.	% -----	1	2	3	4	5	6-10	11-20	21-30	31-50	>50

PLDA1606

Latitude: 61°38.632'N
Longitude: 009°48.925'W
Echo sounding depth: 1100 m
Bottom depth corr.: 1101 m
Time of deployment: 10/6 - 2016 0502 UTC
Time of recovery: 19/5 - 2017 0611 UTC

MicroCat

Instrument no.: 6094
Height above bottom: 44 m
Instrument depth: 1057 m
Time of first data: 10/6 - 2016 0520 UTC
Time of last data: 19/5 - 2017 0610 UTC
Sample interval: 10 min
No. of ensembles: 49398

Aanderaa

Instrument no.: RCM9 721
Height above bottom: 24 m
Instrument depth: 1077 m
Time of first data: 10/6 - 2016 0600 UTC
Time of last data: 19/5 - 2017 0500 UTC
Sample interval: 60 min
No. of ensembles: 8232

SBE56's

Instrument no.: 6503, 6505
Height above bottom: 4 m, 34 m
Instrument depth: 1097 m, 1067 m
Time of first data: 10/6 - 2016 0549 UTC
Time of last data: 19/5 - 2017 0559 UTC
Sample interval: 10 min
No. of ensembles: 49394

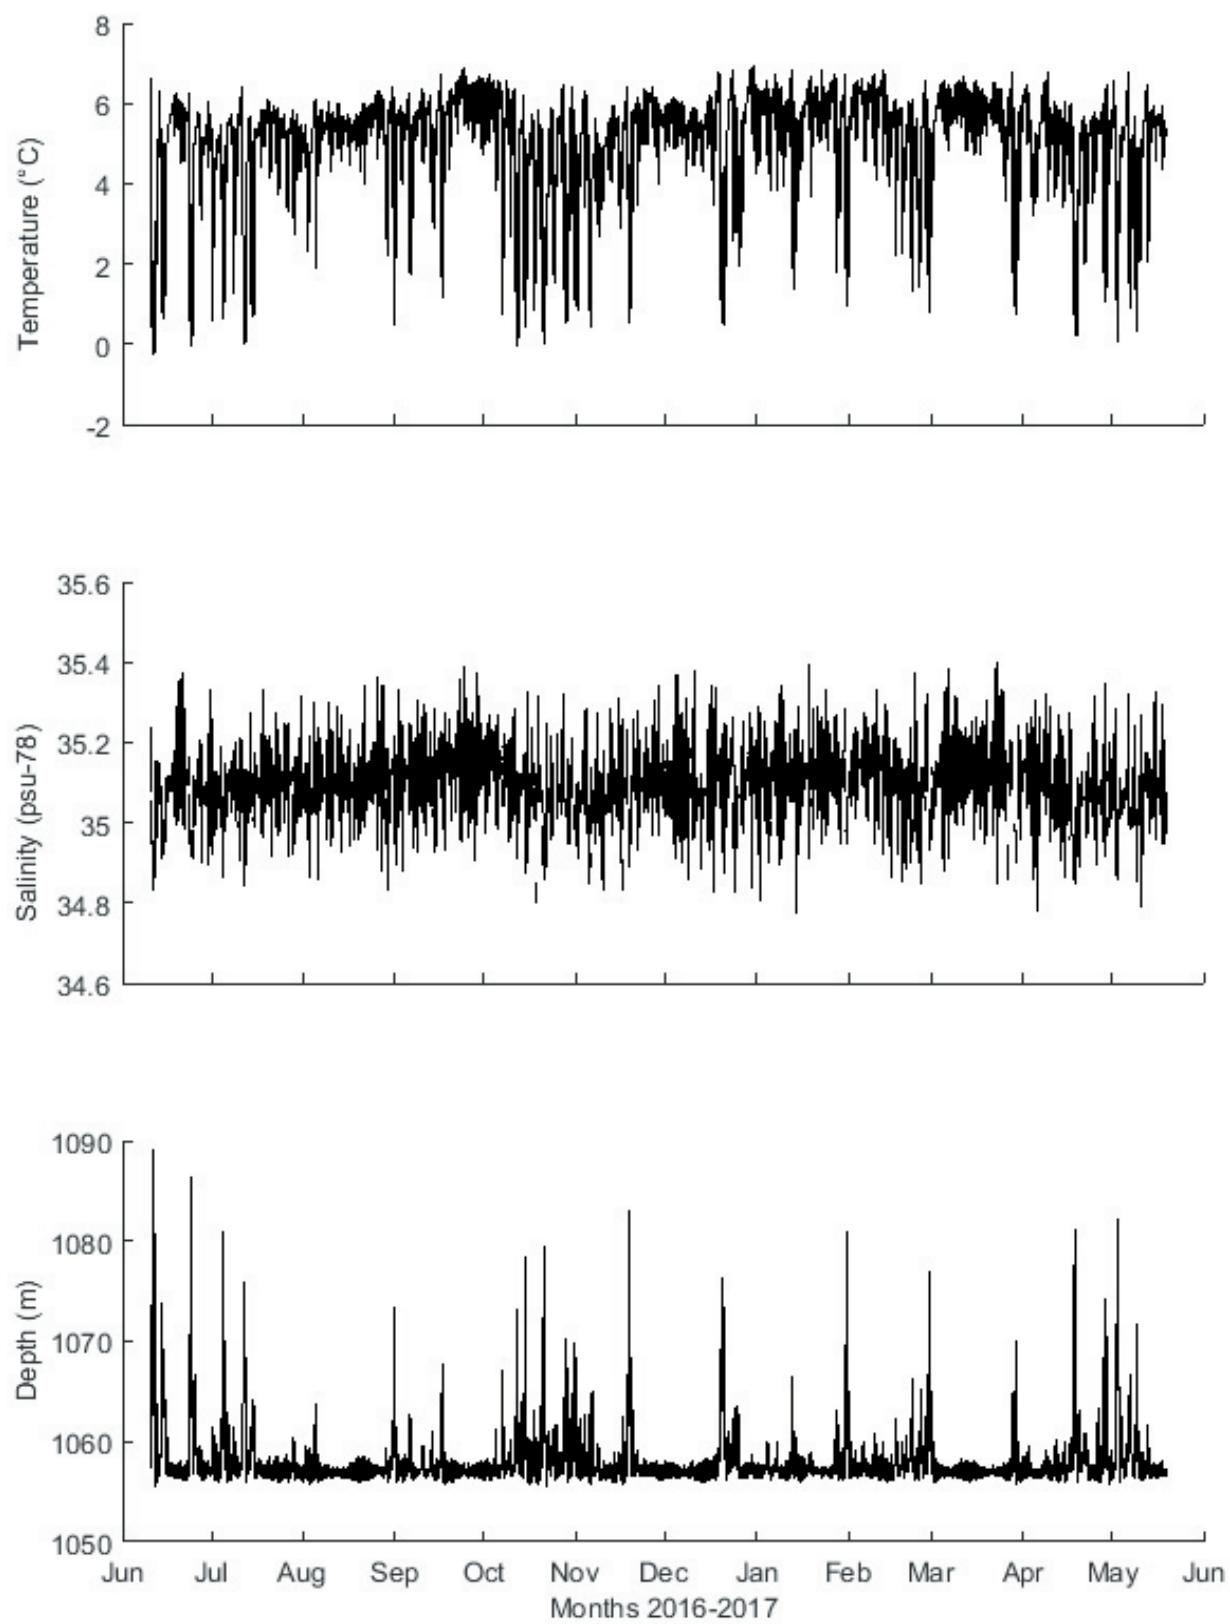

Starmon

Instrument no.: 0689
Height above bottom: 5 m
Instrument depth: 1096 m
Time of first data: 10/6 - 2016 0620 UTC
Time of last data: 19/5 - 2017 0600 UTC
Sample interval: 10 min
No. of ensembles: 49391

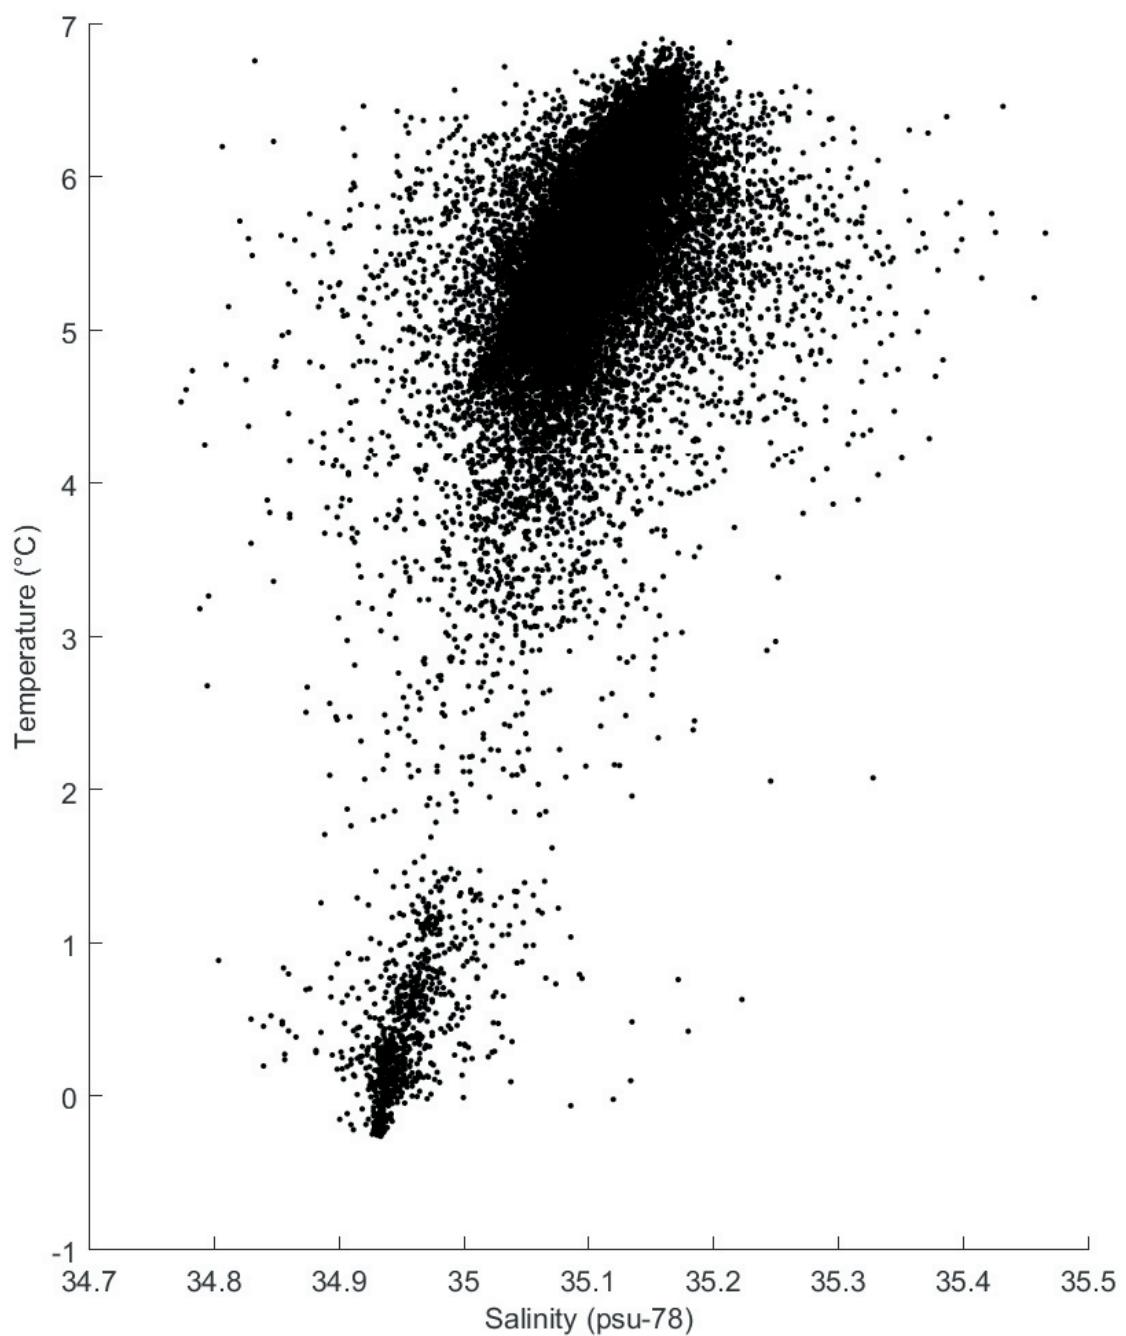

Data:

The Aanderaa temperature exceeded maximum temperature interval settings.

PLDA1606 Aanderaa 721

PLDA1606 Aanderaa 721

PLDA1606 Temperature recorders

PLDB1606

Latitude: 61°37.851'N
Longitude: 009°46.780'W
Echo sounding depth: 1089 m
Bottom depth corr.: 1086 m
Time of deployment: 10/6 - 2016 0429 UTC
Time of recovery: 19/5 - 2017 0701 UTC

MicroCat

Instrument no.: 5184
Height above bottom: 43 m
Instrument depth: 1043 m
Time of first data: 10/6 - 2016 0450 UTC
Time of last data: 19/5 - 2017 0700 UTC
Sample interval: 10 min
No. of ensembles: 49406

Aanderaa

Instrument no.: RCM9 718
Height above bottom: 23 m
Instrument depth: 1063 m
Time of first data: 10/6 - 2016 1100 UTC
Time of last data: 29/6 - 2016 0900 UTC
Sample interval: 60 min
No. of ensembles: 455

SBE56's

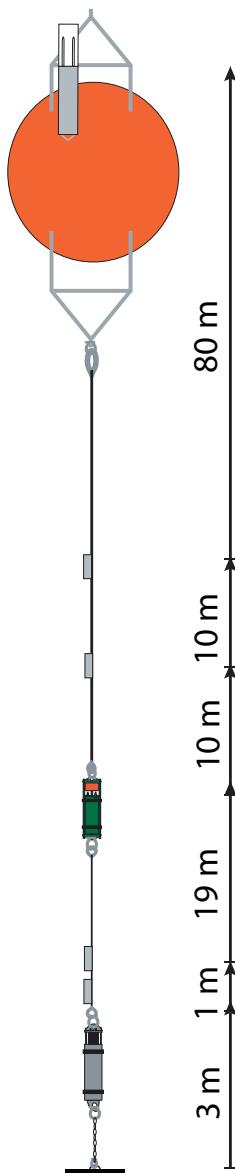

Instrument no.: 6506, 6504
Height above bottom: 3 m, 33 m
Instrument depth: 1083 m, 1053 m
Time of first data: 10/6 - 2016 0519 UTC
Time of last data: 19/5 - 2017 0659 UTC
Sample interval: 10 min
No. of ensembles: 49403

Starmon

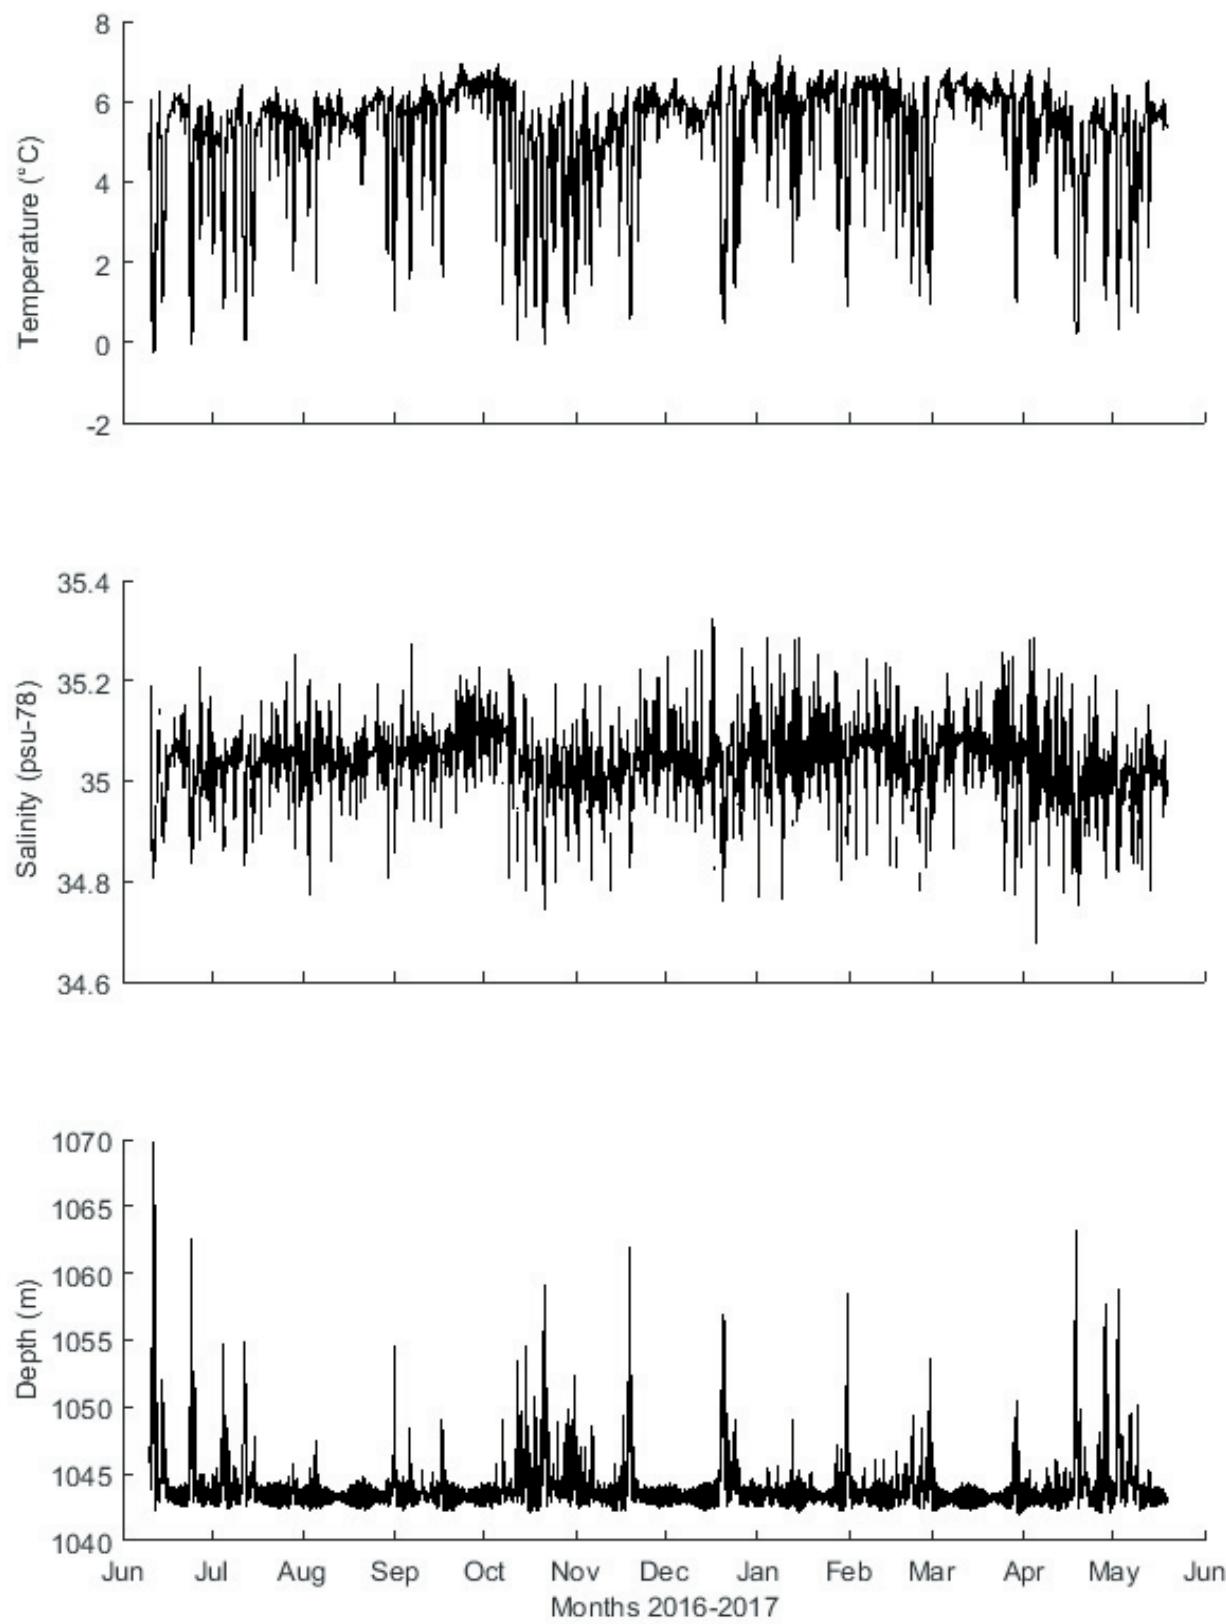

Instrument no.: 1672
Height above bottom: 4 m
Instrument depth: 1082 m
Time of first data: 10/6 - 2016 0530 UTC
Time of last data: 19/5 - 2017 0650 UTC
Sample interval: 10 min
No. of ensembles: 49401

Data:

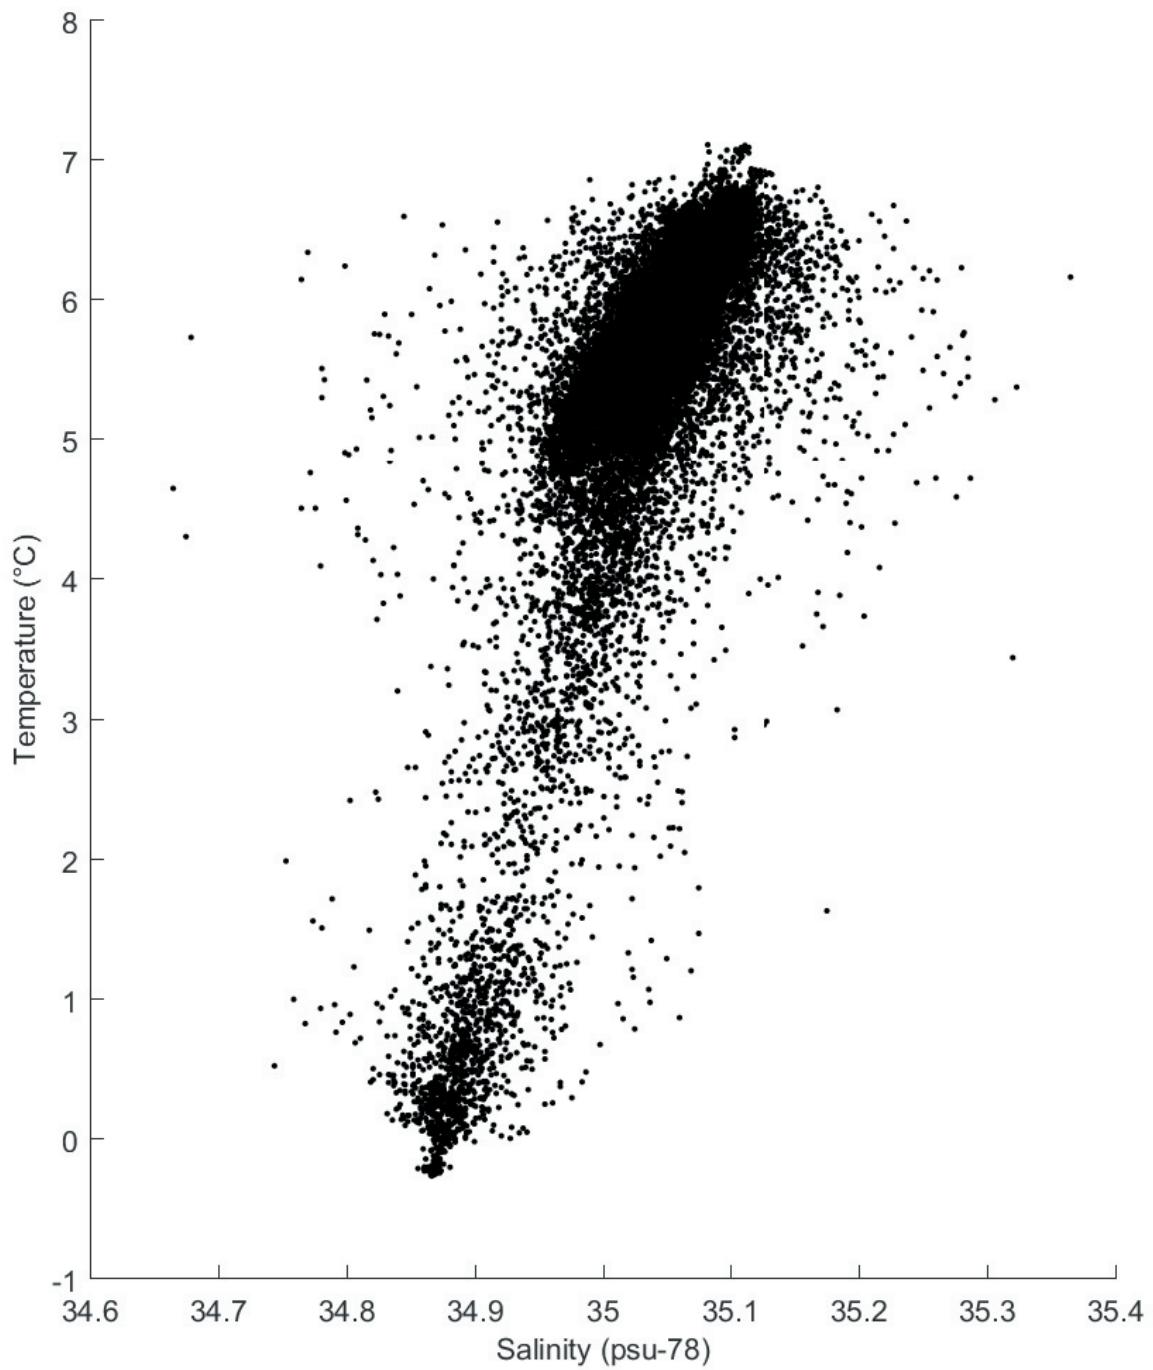

The Aanderaa had a leakage and stopped after 19 days.
The Aanderaa temperature exceeded maximum temperature interval settings.

PLDB1606 MicroCat 5184

PLDB1606 MicroCat 5184

PLDB1606 Aanderaa 718

Deployment: PLDB1606 analyzed from beginning to end
 Instrument no.: 718
 Instrument type: Aanderaa
 Latitude: 61 37.851 N
 Longitude: 09 46.780 W
 Bottom depth: 1086
 Instrument depth: 1063
 Number of records: 455
 Time of first record: 2016 06 10 11 00
 Time of last record: 2016 06 29 09 00
 Time between records (min.): 60.000

Parameters	Records OK	Records flagged
Column 1 : Recno		
Column 2- 4: Date		
Column 5- 6: Time		
Column 7 : Temp	191	264
Column 8 : Speed	455	0
Column 9 : Direct	455	0

Comments

Residual current: 303 mm/sec towards: 304 degrees

TIDAL ANALYSIS

Error flagged records interpolated for velocity: 0, records not int.: 0
 Tidal analysis performed on unfiltered data
